

ClipChap

The Power-Clipboard-Manager.

ClipChap stores new text and graphic objects in the clipboard and stores them for later use. The stored objects can be edited, viewed and copied back to the clipboard. There's a nice tool for programmers, that re-aligns viewed C++ codes at the { } brackets. Texts can be sorted alphabetically... Furthermore ClipChap can take care of your downloads and leaves you enough bandwidth to continue your surfing in internet.

Menu items:

File

 Open Set	Loads a collection.
 Open File	Loads a file into collection
 Save Set	Saves the current collection to a file.
 Save Selection	Save current selection as text/word doc/bmp/jpg/wmf...
 Send Email	Sends selection as attachment per mail.
 HWND Snapshot	Asks for clicking a window and copies this to clipboard. Also works for buttons!
 Glue together	Glues the first 2 text items together as one text
 Host image	Hosts the selected image on an image server and copies a forum compatible link to clipboard. See imghost.ini in program directory.

Object

 Relabel	Change the list text for an object.
 Delete	Removes the selected object from the list.
 View	View Object. (Right-click an object)
 Send	Sends an object though intranet to another instance of ClipChap.

Extras

Options	Options for ClipChap
Active	Enables / Disables ClipChap activity.

Keyboard:

These keys are defined or assigned globally when running a ClipChap instance:

WIN+Alt+C:	Opens the ClipChap Window
Enter	Copy active selection to clipboard
Delete	Deletes selected item
Space Bar	Rename selected item
Up/Down	Browse objects

Internet Support:

In the options dialog there is a checkbox called 'Url Download'. If it's checked, internet files (starting HTTP:// or FTP://) will be copied to the specified directory. Therefore, you can e.g. search for MP3 files. If you like, one click it with the right mouse button and select 'Copy link location' from the menu. (May differ depending on the browser).

ClipChap will now start the download in the background as you can see in the title bar of the program.

While doing this the download is limited to a specified amount of bytes per second. Therefore, you can continue your internet research without having to wait for the download to be completed. When a location is saved successfully, the text will be marked with an asterisk (*) at the beginning of the object (right click an object to view its content).

Network Support:

In order to send an item from one computer to another, both must select the option "allow intranet-mails".

Then the sender must select an item, press right mouse button on the frame and select "object / send" from the menu. Then the user will be asked what computer the file should be transferred to and the transfer begins.
