

Through the virtual camera, you can replace your real-time chat video with the avatar in the VUP.

For example, use Skype to video chat with your friends, or use zoom to have a meeting.

Regarding the application of virtual camera for VUP, I will introduce two methods below

Method 1: The virtual camera "UnityCam" that comes with VUP

Method 2: OBS virtual camera

The virtual camera that comes with VUP can only be used normally on some video chat software, such as: Zoom, WeChat, Dingtalk, QQ, Microsoft Teams (Web side only)...

If you set the VUP virtual camera "UnityCam" in the video chat software, but the video screen is black, please use method two "OBS virtual camera".

The two methods will be introduced in detail below.

## **Part 1 The virtual camera "UnityCam" that comes with VUP**

### **1. How to set the virtual camera "unitycam" ?**

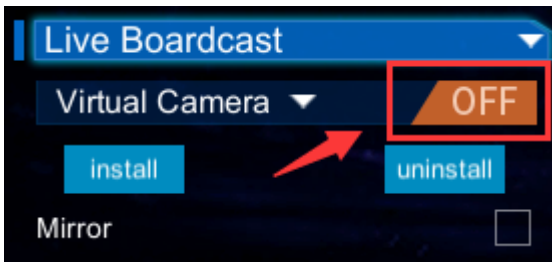

(1) Install "UnityCam"

Broadcast > Live Boardcast > Virtual Camera

Click the button "install" to install "UnityCam".

(2) Enable the virtual camera in VUP.  
Click the button "OFF" to enable.

(3) Set the camera to "UnityCam" in the video chat software

## 2. Virtual camera "UnityCam" installation failed?

For example click the button "Install" and nothing happens, or the pop-up prompts "module VUPCamService32.ax 加载失败" (It means installation failed).

How to solve it?

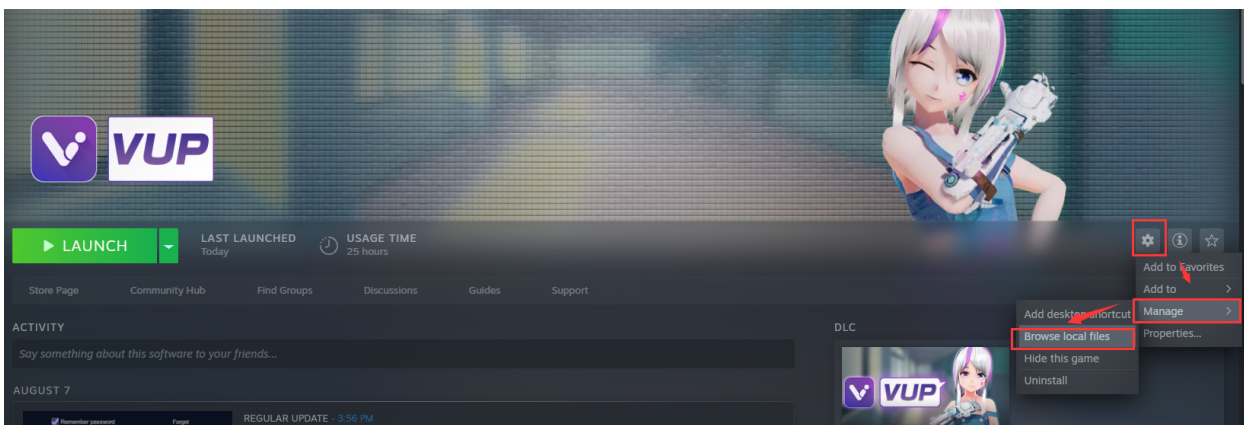

Please try the solution below

(1) Find the installation path of VUP, and then open the folder one by one as follow

VUP ---> controller ---> controller\_Data ---> StreamingAssets ---> VUPCam

Then right-click "Register" to run this file as administrator.

If the installation is successful, there will be multiple popup prompts for successful installation, such as the prompt "DllRegisterServer 在 VUPCamService32.dll 已成功".

(2) If you try the method 1, and the installation still fails, please do as follows

- Download the "Repair Software for Virtual Cam" package

Link of the repair software:

[https://twitter.com/vup\\_v/status/1245201905686466560?s=20](https://twitter.com/vup_v/status/1245201905686466560?s=20)

- Unzip this package, open the unzipped folder, click on the "DirectX\_Repair\_win8\_win10.exe" file, and then click [检测并修复].

After the automatic repair is completed, click the button [install] in VUP to reinstall the virtual camera.

(4) If the above three methods have been tried, the installation still fails, then use the virtual camera of OBS.

## Part 2 OBS virtual camera

### 1. How to set the OBS virtual camera?

<https://www.youtube.com/watch?v=tSxEBr7jdSE&t=89s>

### 2. Link of OBS virtual camera plug-in?

GitHub: <https://github.com/Fenrirthviti/obs-virtual-cam/releases>

MEGA: <https://mega.nz/file/TyZSUArQ#GgMxBr66Wik7dGlvnv0gRC-Hs-jxbJiHMhNSFChZD-w>

### **3. The virtual camera option doesn't appear in the "Tools" option of OBS?**

(1) First, confirm whether the plug-in is installed in the same directory as OBS.

As shown in the video (0:32~1:05)

If this step is ok, please go the next step

(2) Check if there is a folder "obs-studio" with the same name under the Obs-studio folder. In fact, the folder with the same name is "virtual camera". Open this internal "obs-studio", and then open the folder "obs\_plugins", two folders will appear at this time, namely "64bit" and "32bit". Then, you open the "64bit" folder and copy the dll file "obs\_virtualoutput" inside.

(3) Return to the root directory "Obs-studio" of the outermost OBS (note: this is the outermost Obs-studio), then open his "obs\_plugin" folder, and then paste the dll file "Obs\_virtualoutput".

(4) At this time, when you open OBS, you will see the option of "Virtual Camera" under the tool options. Check the box "AutoStart", and the names of the two buttons in the lower right corner may appear garbled. But it does not affect, according to the relative position, click the button on the left.
