

# 鉄道運転士VR

Train Simulator VR

Let's operate a train following the instructions in the monitor!!

This game requires two controllers.

Reverse knob  
Left hand controller

Master control  
Right hand controller

The right hand controller mainly operates "brake lever".  
When bringing your right hand close to the brake lever, when it glows yellow, please pull the trigger and hold it.  
The left hand controller mainly operates "master control". Move the left hand closer to the mascon and when it glows yellow, pull the trigger and hold it.  
"Reverse knob" is used when you want to train the train.

## Explanation of operation plan

①

Pull triggers on both controllers to start game.  
Select an electric train or a steam train (electric train here).  
Select a stage and sit on the motorman's cab!!

②

Grip the brake lever with the right hand controller and turn it clockwise.  
The brake is unlocked.  
To apply the brake, turn the lever anticlockwise.

③

Grip the mas-con with your left hand and turn it clockwise.  
The train starts moving.  
It slows down when you releases your hand.

④

Operate the train according to instructions in orange displayed in the monitor.  
The game will be over when a finish message is displayed.
